

Start with an empty, sturdy pallet. Please make sure that no nails, splinters or sharp edges exist.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

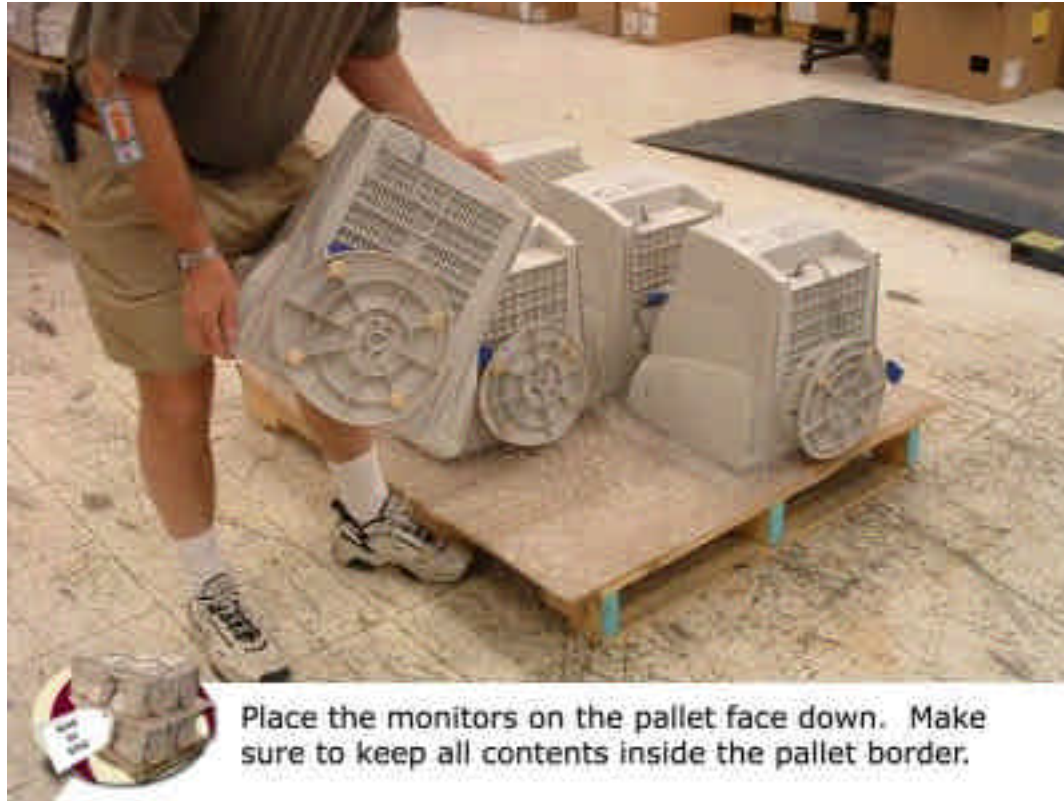

To add to the overall strength of the final pallet, add on a piece of cardboard or like material to the base.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

Add on a single layer of bubble wrap to the pallet.  
This will help cushion the monitors.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

Place the monitors on the pallet face down. Make sure to keep all contents inside the pallet border.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

Keeping the monitors inside the borders of the pallet helps prevent damage (ie bases being broken off, etc.)

**View this Guide Online: <http://www.csileasingservices.com/info/>**

Note also that the connection cords are wrapped tightly around the base of the monitor on each unit.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

A second layer of cardboard, and bubble wrap, is added to accommodate the second layer of monitors.

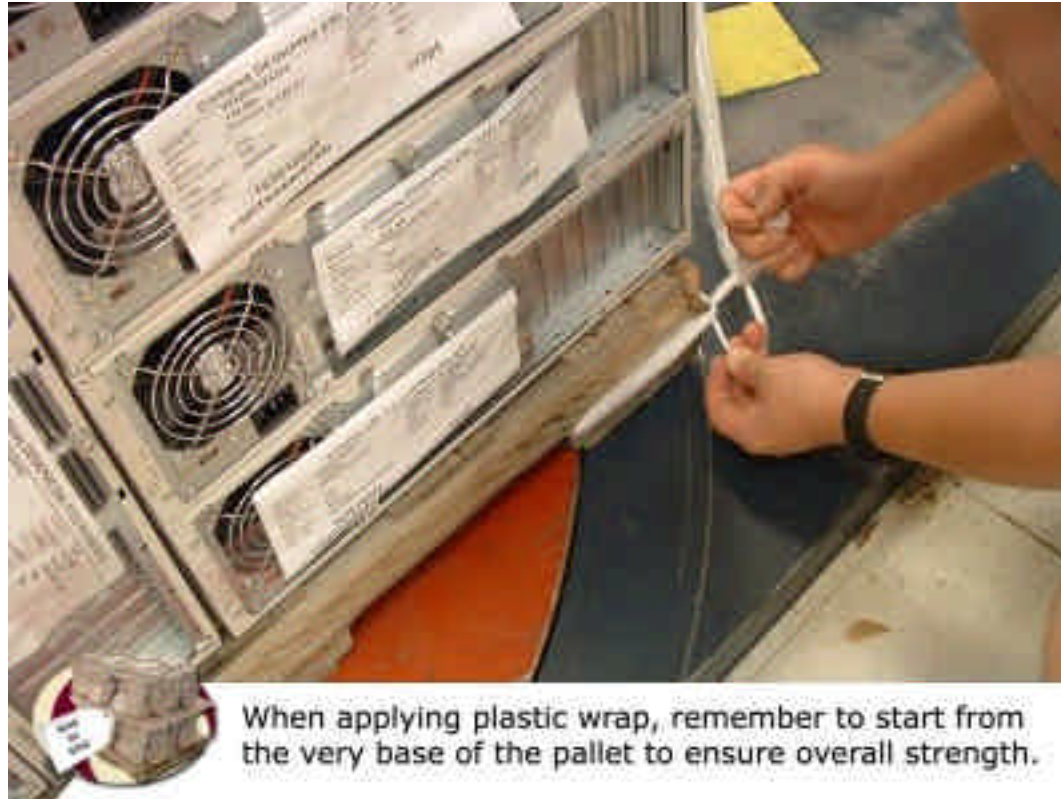

**View this Guide Online: <http://www.csileasingservices.com/info/>**

After the second layer of monitors is in place, strapping tape is applied to help strengthen the overall package.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

When applying plastic wrap, remember to start from the very base of the pallet to ensure overall strength.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

Whether it be with a hand wrapper or a machine like this one, remember to go to the top and back down.

**View this Guide Online: <http://www.csileasingservices.com/info/>**

When completed, your monitor pallet should look very much like the one shown above.
